cellofoam[®]

permalaunch[™]

Quick Facts:

- * Great for Kayaks, Canoes, & Stand Up Paddle Boards
- * Cradles vessel for added stability
- * Float on and float off design
- * Mounts to fixed or floating docks
- * Color Options: Tan or Grey Granite
- * Slip Resistant Surface
- * Custom designed railings allow for easy use of paddle to float on and off
- * Additional launching & retrieving rails available
- * Vertical hand rails also available
- * Heavy Duty Hardware

The **perma**launch[™] features a Custom Cradle Design. The three middle underwater supports allow your vessel to sit on a stable surface greatly enhancing the steadiness of the vessel while you board or disembark. This practically eliminates the rocking back and forth as you try to center yourself in or on the vessel. The open space between the floats is adjustable at installation to allow additional side to side stability based on the widest kayak, canoe, or stand up paddle board you use.

Everything about the **perma**launch[™] was designed for stability and ease of use. The Float Off – Float On Feature's start with the vessel being partially submerged when boarding. The three middle underwater supports create stability for boarding, yet allow buoyancy in the vessel for ease of launch or retrieval. Custom designed hand rails allow you to use your paddle to effortlessly pull the vessel off the launch, or guide yourself back on. The two outside underwater braces are set lower in the water to allow the vessel to launch or float back on with minimal effort from the paddler. You will be amazed at how easily every member of the family can come and go with the **perma**launch[™]!

Directional Options: The base unit comes with one set of hand rails so paddlers may leave and return from the same direction. Optional additional hand rails allow paddlers to leave and return from either direction. Optional vertical hand rails are also available for additional stability in boarding or disembarking, and for stand up paddle boarders additional balance.

Cellofoam

Underwater structure "cradles" the vessel allowing passengers to easily & safely board and disembark.

Enter and exit from one end or both ends, which ever suits your needs.

Custom Designed Hand Rails with Paddle Pull Feature.

Additional hand rail option available for utilizing both directions to enter and exit.

Works great with 1 & 2 passenger Kayaks and Canoes!
Also works on Stand-Up Paddle Boards!

Low Profile for handling vessels.

Mounting Hardware is easy to install and features quiet components for less noise in wave activity.

Width adjustable at installation.

Minimal foot print in the water.

Commercial or Residential Applications
